## BB9000 WHOLE HOUSE FILTRATION

The Ultima BB9000 Whole House Filtration System Is Designed To Improve The Water You Need Every Day.

The Ultima BB9000 sediment pre-filter system reduces particulates in the supplied water down to 5 micron (20 times smaller than a human hair) in size. Routine replacement of this 5-micron sediment filter will increase the effectiveness and protect plumbing and appliances from excess sediment. With average use, each filter is effective for approximately 6-12 months. The unit comes in 3 colors, solid white, blue and black.

The Ultima BB9000 prevents dirt, rust and debris from entering your home. It's like the A/C filter in your home or the fuel filter in your car. The pre-filter system removes all of the little particles in your water that can clog aerators, shower heads, and build up in your faucets, sprayers, hot water heaters, dishwasher's etc.
